“grad-school Vietnam”

“charred remains”

“would-be Ph.D.s”

-Olin Shivers

Parsing should be simple.

Parsing should be functional.

Parsing should be fun.

It is not.

LL vs. LR

LR vs. LALR

Derivatives of Regular Expressions

JANUSZ A. BRZOZOWSKI

Princeton University, Princeton, New Jersey†

Abstract. Kleene's regular expressions, which can be used for describing sequential circuits, were defined using three operators (union, concatenation and iterate) on sets of sequences. Word descriptions of problems can be more easily put in the regular expression language if the language is enriched by the inclusion of other logical operations. However, in the problem of converting the regular expression description to a state diagram, the existing methods either cannot handle expressions with additional operators, or are made quite complicated by the presence of such operators. In this paper the notion of a derivative of a regular expression is introduced and the properties of derivatives are discussed. This leads, in a very natural way, to the construction of a state diagram from a regular expression containing any number of logical operators.

```

Concatenation?

Needs nullability operator

Nullability

$\delta(L) = \epsilon$ if $\epsilon \in L$

$\delta(L) = \emptyset$ if $\epsilon \notin L$

```
(define-struct δ {lang})
```

```
(define (D c L)
  (match L
```

```
  [ (δ _) (ø) ]
```

$$D_c(L_1\cdot L_2)=$$

$$D_c(L_1\cdot L_2)=\left(D_cL_1\cdot L_2\right)$$

$$D_c(L_1\cdot L_2)=\left(D_cL_1\cdot L_2\right)\cup \left(\delta(L_1)\cdot D_cL_2\right)$$

```
(define (D c L)
  (match L
    [ (o L1 L2)      (u (o (δ L1) (D c L2))
                           (o (D c L1) L2))]))
```

```

(define (D c L)
  (match L
    [ (ø)           (ø) ]
    [ (ε)           (ø) ]
    [ (token a)     (cond [(eqv? a c) (ε)]
                           [else             (ø) ] ) ]
    [ (δ _)         (ø) ]

    [ (U L1 L2)    (U (D c L1)
                       (D c L2)) ]
    [ (★ L1)        (◦ (D c L1) L) ]
    [ (◦ L1 L2)    (U (◦ (δ L1) (D c L2))
                       (◦ (D c L1) L2)) ] ) )

```

To recognize?

Need to *compute* nullability

$$\delta(e) \equiv e$$

$$\delta(c) \equiv \emptyset$$

$$\delta(\emptyset) \equiv \emptyset$$

$$\delta(L_1 \cup L_2) = \delta(L_1) \cup \delta(L_2)$$

$$\delta(L_1 \cdot L_2) = \delta(L_1) \cdot \delta(L_2)$$

$$\delta(L_1^\star)=\epsilon$$

```
(define (nullable? L)
  (match L
    [(\emptyset) #f]
    [(ε) #t]
    [(token _) #f]
    [(δ L1) (nullable? L1)]

    [(* _ ) #t]
    [(∪ L1 L2) (or (nullable? L1)
                      (nullable? L2))]

    [(◦ L1 L2) (and (nullable? L1)
                      (nullable? L2))]))
```

```
(define (recognizes? w L)
  (if (null? w)
    (nullable? L)
    (recognizes? (cdr w) (D (car w) L)))) )
```

How about context-free grammars?

Recursive regular expressions.

Problem

$$L = L \cdot x$$

$$\cup \epsilon$$

Problem

$$D_x L = D_x L \cdot x$$

$$\cup \epsilon$$

(D⁻¹xL) =

$$\begin{aligned}
 (D^{-1}x L) &= (D^{-1}x (U (\circ L^{-1}x) \\
 &\quad \varepsilon)) \\
 &= (U (U (\circ (D^{-1}x L)^{-1}x) \\
 &\quad (\circ (\delta L) (D^{-1}x^{-1}x))) \\
 &\quad (D^{-1}x \varepsilon))
 \end{aligned}$$

(D⁻¹xL) =

$$\begin{aligned}
 (D^{-1}x L) &= (D^{-1}x (U (\circ^{-1}x L) \\
 &\quad \varepsilon)) \\
 &= (U (U (\circ (D^{-1}x^{-1}x) L) \\
 &\quad (\circ (\delta^{-1}x) (D^{-1}x L))) \\
 &\quad (D^{-1}x \varepsilon))
 \end{aligned}$$

Solution?

```
(define-struct Ø {})
(define-struct ε {})
(define-struct token {value})

(define-struct U {this that})
(define-struct o {left right})
(define-struct ★ {lang})

(define-struct δ {lang})
```

```
(define-struct Ø      {})
(define-struct ε      {})
(define-struct token {value})

(define-lazy-struct U {this that})
(define-lazy-struct ° {left right})
(define-lazy-struct ★ {lang})

(define-lazy-struct δ {lang})
```

Problem

$$\delta(L) = \delta(L) \cdot \delta(x)$$

$$\cup \delta(e)$$

Problem

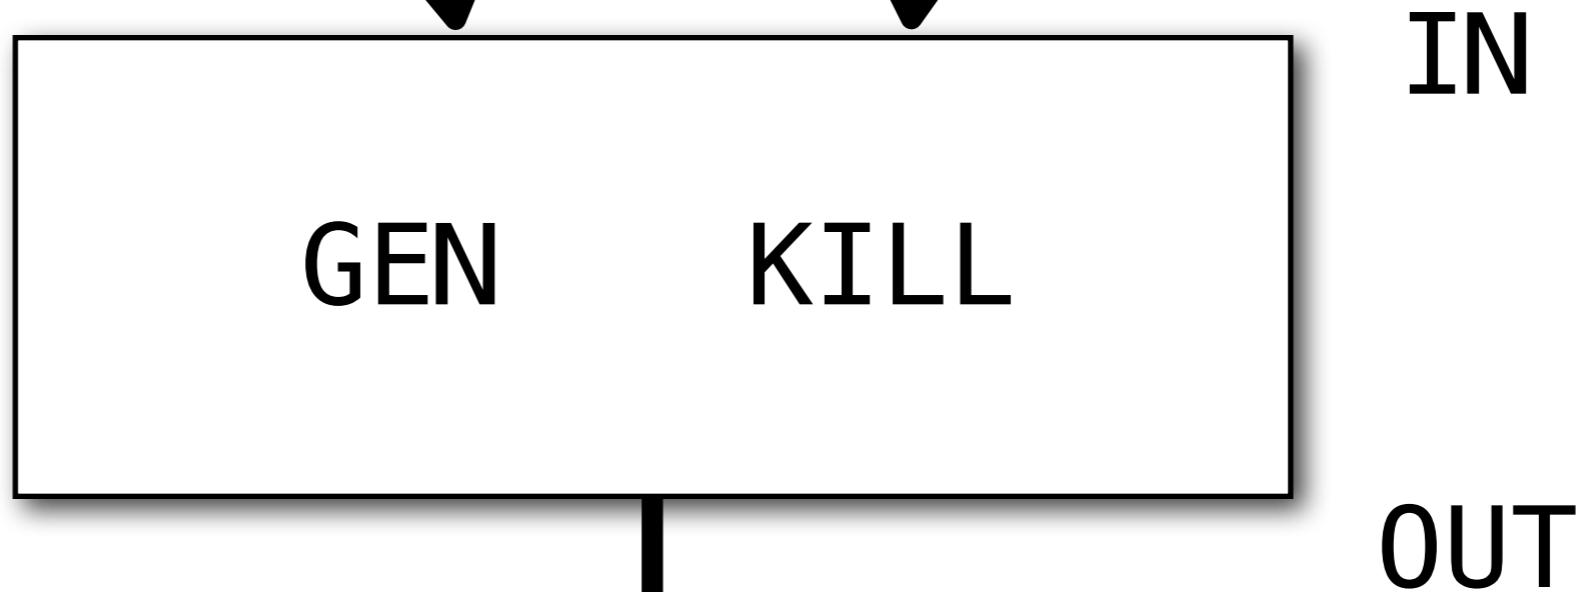

$$\delta(L) = \delta(L) \cdot \delta(x)$$
$$\cup \delta(e)$$

Solution?

Fix it.

```
(define (nullable? L)
  (match L
    [(\emptyset) #f]
    [(ε) #t]
    [(token _) #f]
    [(δ L1) (nullable? L1)]

    [(* _)
     (#t)
     [(∪ L1 L2) (or (nullable? L1)
                      (nullable? L2)))]
     [(◦ L1 L2) (and (nullable? L1)
                      (nullable? L2)))])))
```

```
(define/fix (OUT stmt)
  #:bottom ⊘

$O(2^{2n} G^2)$

Compaction

$$\emptyset \circ p = p \circ \emptyset \Rightarrow \emptyset$$

$$\emptyset \cup p = p \cup \emptyset \Rightarrow p$$

$$(\epsilon\downarrow\{t_1\})\circ p\Rightarrow p\rightarrow\lambda t_2.(t_1,t_2)$$

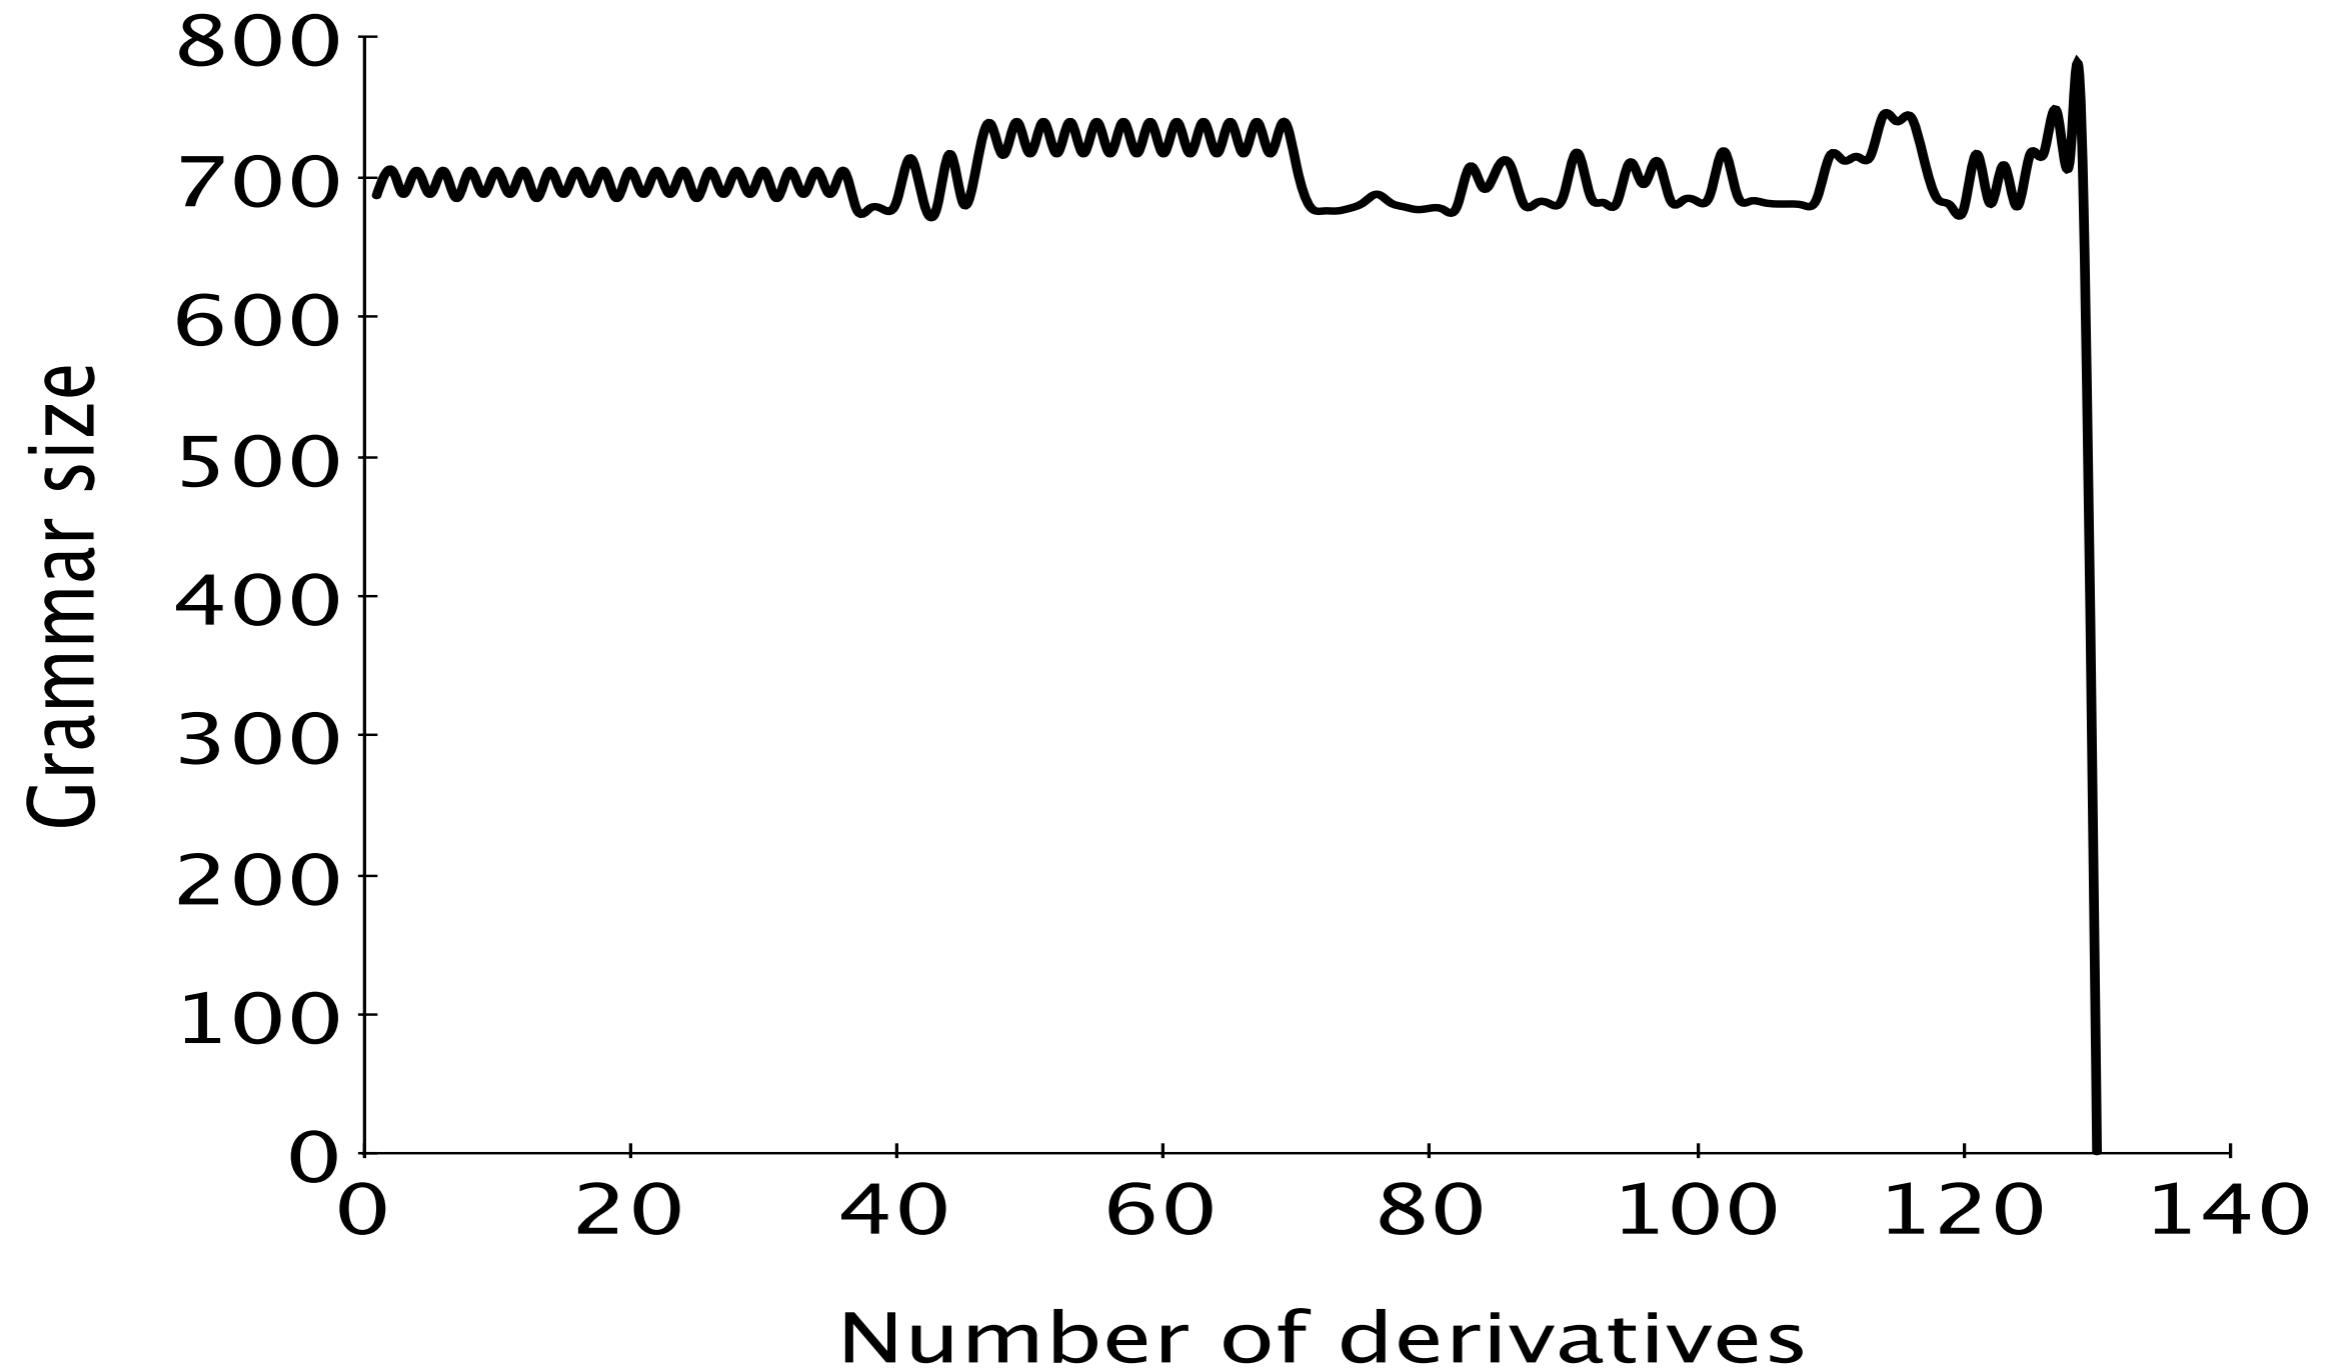

$$p\circ (\epsilon\downarrow\{t_2\})\Rightarrow p\rightarrow\lambda t_1.(t_1,t_2)$$

$$(\epsilon\downarrow\{t_1,\ldots,t_n\})\rightarrow f\Rightarrow\epsilon\downarrow\{f(t_1),\ldots,f(t_n)\}$$

$$((\epsilon\downarrow\{t_1\})\circ p)\rightarrow f\Rightarrow p\rightarrow\lambda t_2.(t_1,t_2)$$

$$(p\rightarrow f)\rightarrow g\Rightarrow p\rightarrow(g\circ f)$$

$$\emptyset^\star\Rightarrow\epsilon\downarrow\{\langle\rangle\}\,.$$

Practice

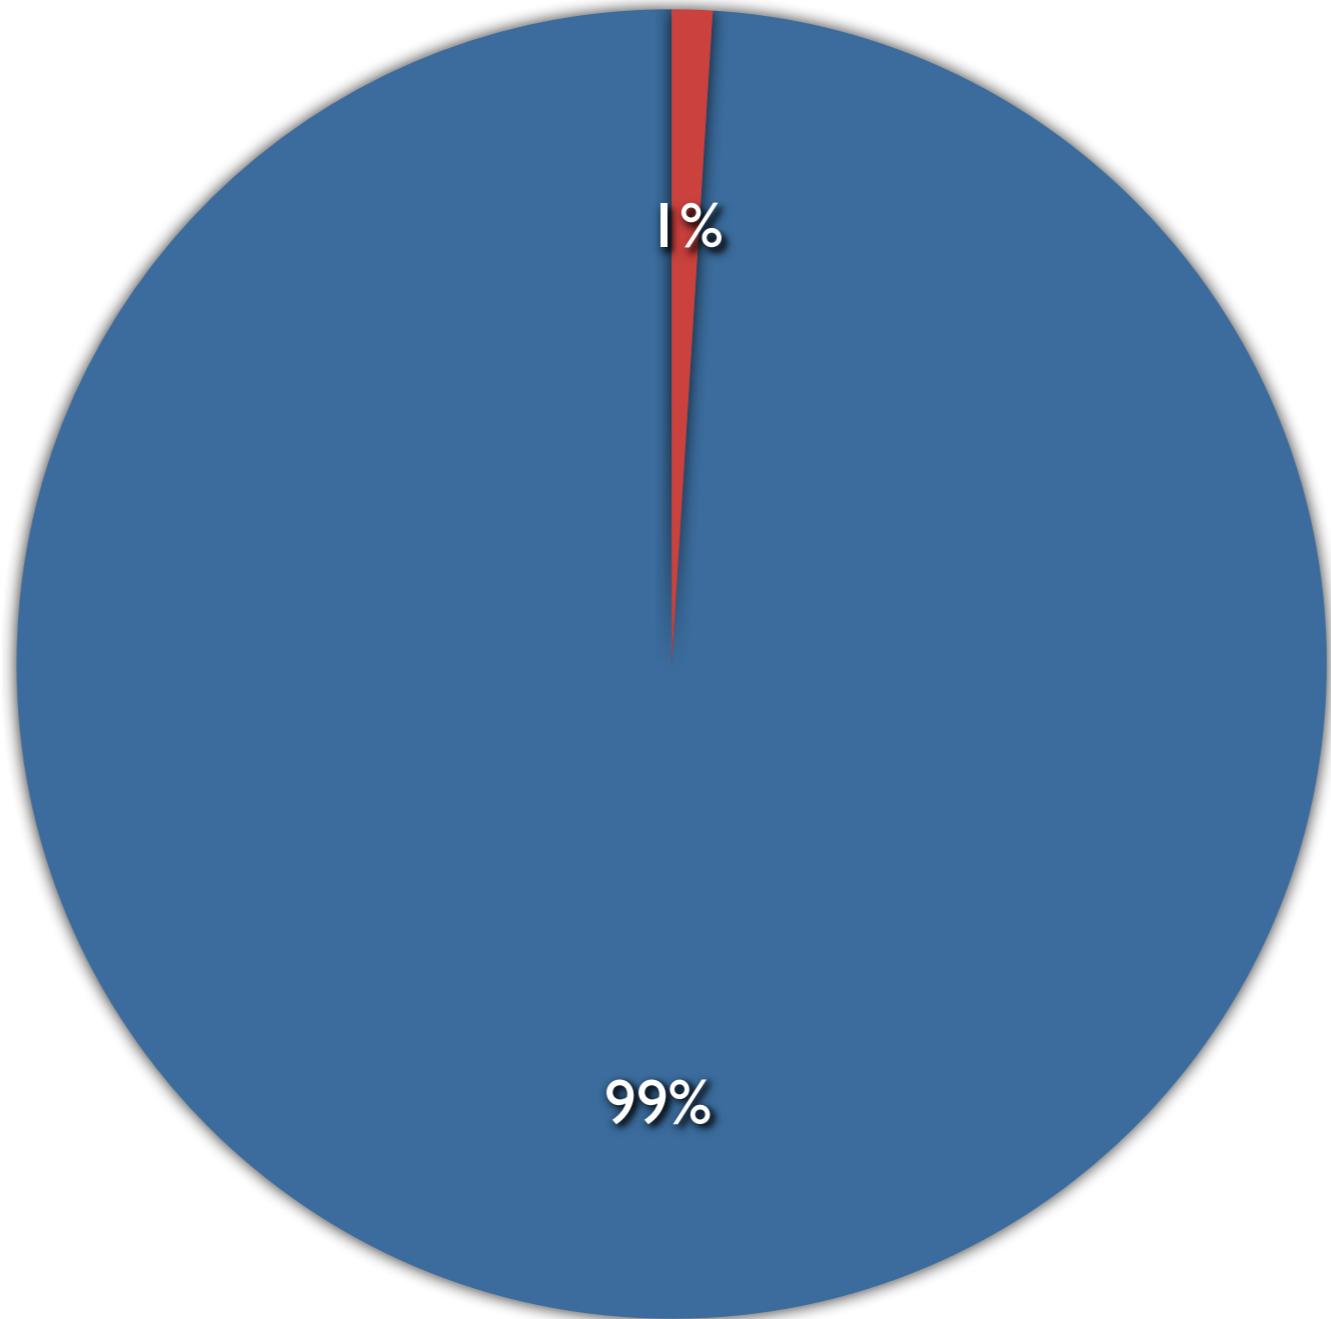

$\approx O(nG)$

Performance

Good enough.

Compaction

$$p \cdot \emptyset = \emptyset$$

$$\emptyset \circ p = p \circ \emptyset \Rightarrow \emptyset$$

$$\emptyset \cup p = p \cup \emptyset \Rightarrow p$$

$$(\epsilon\downarrow\{t_1\})\circ p\Rightarrow p\rightarrow\lambda t_2.(t_1,t_2)$$

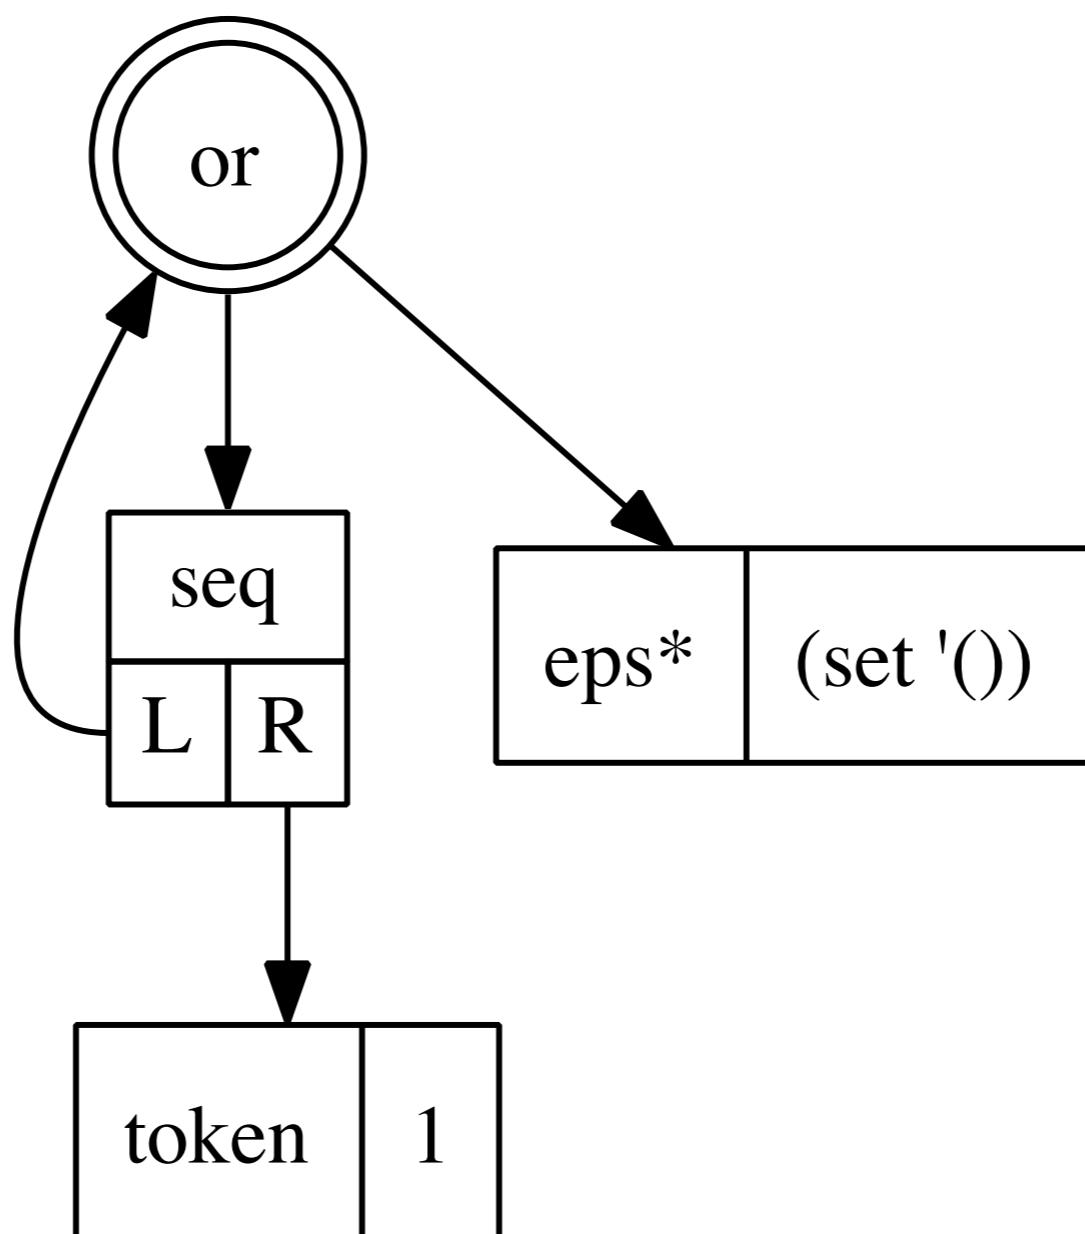

$$p\circ (\epsilon\downarrow\{t_2\})\Rightarrow p\rightarrow\lambda t_1.(t_1,t_2)$$

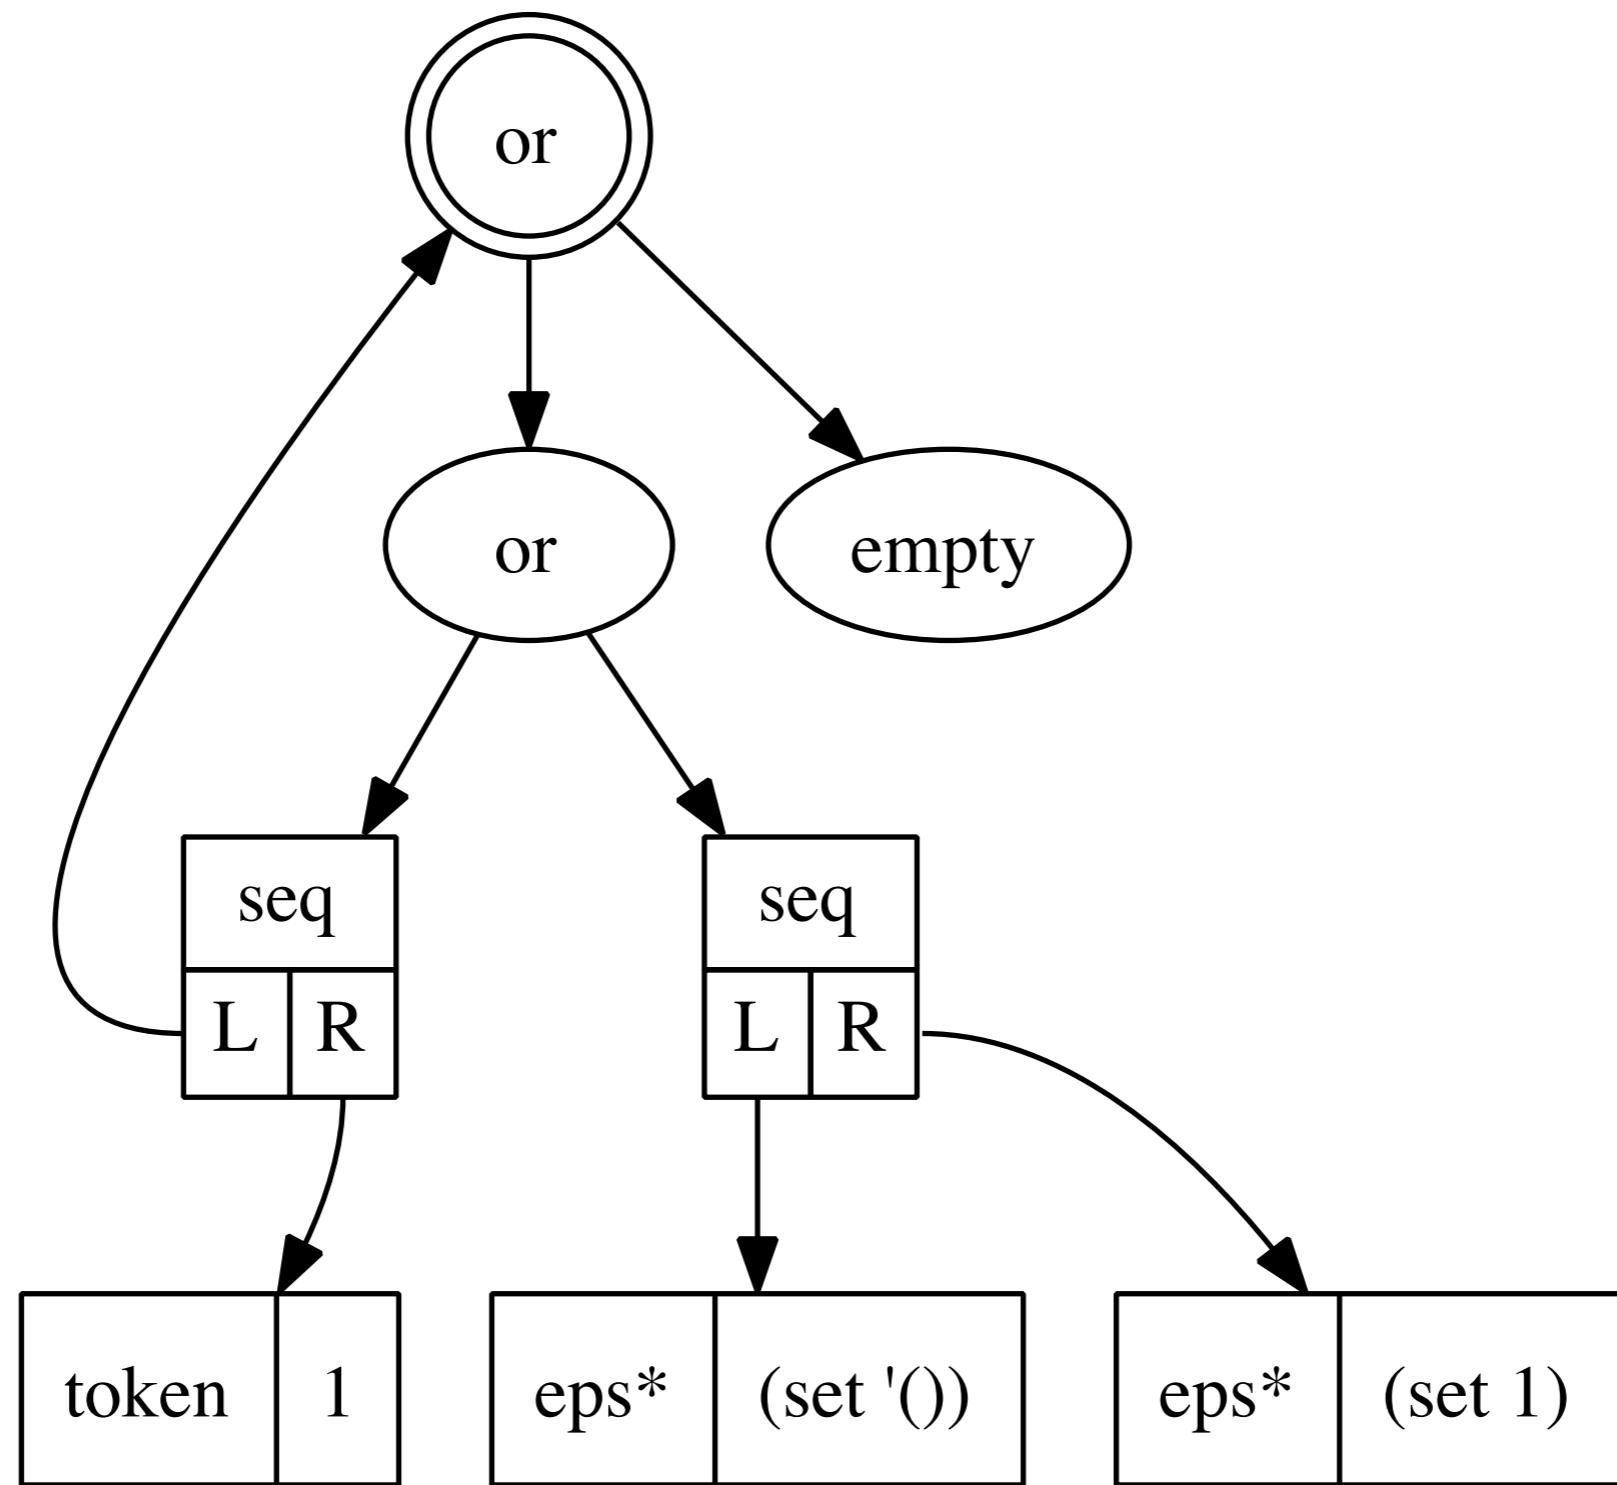

$$(\epsilon\downarrow\{t_1,\ldots,t_n\})\rightarrow f\Rightarrow\epsilon\downarrow\{f(t_1),\ldots,f(t_n)\}$$

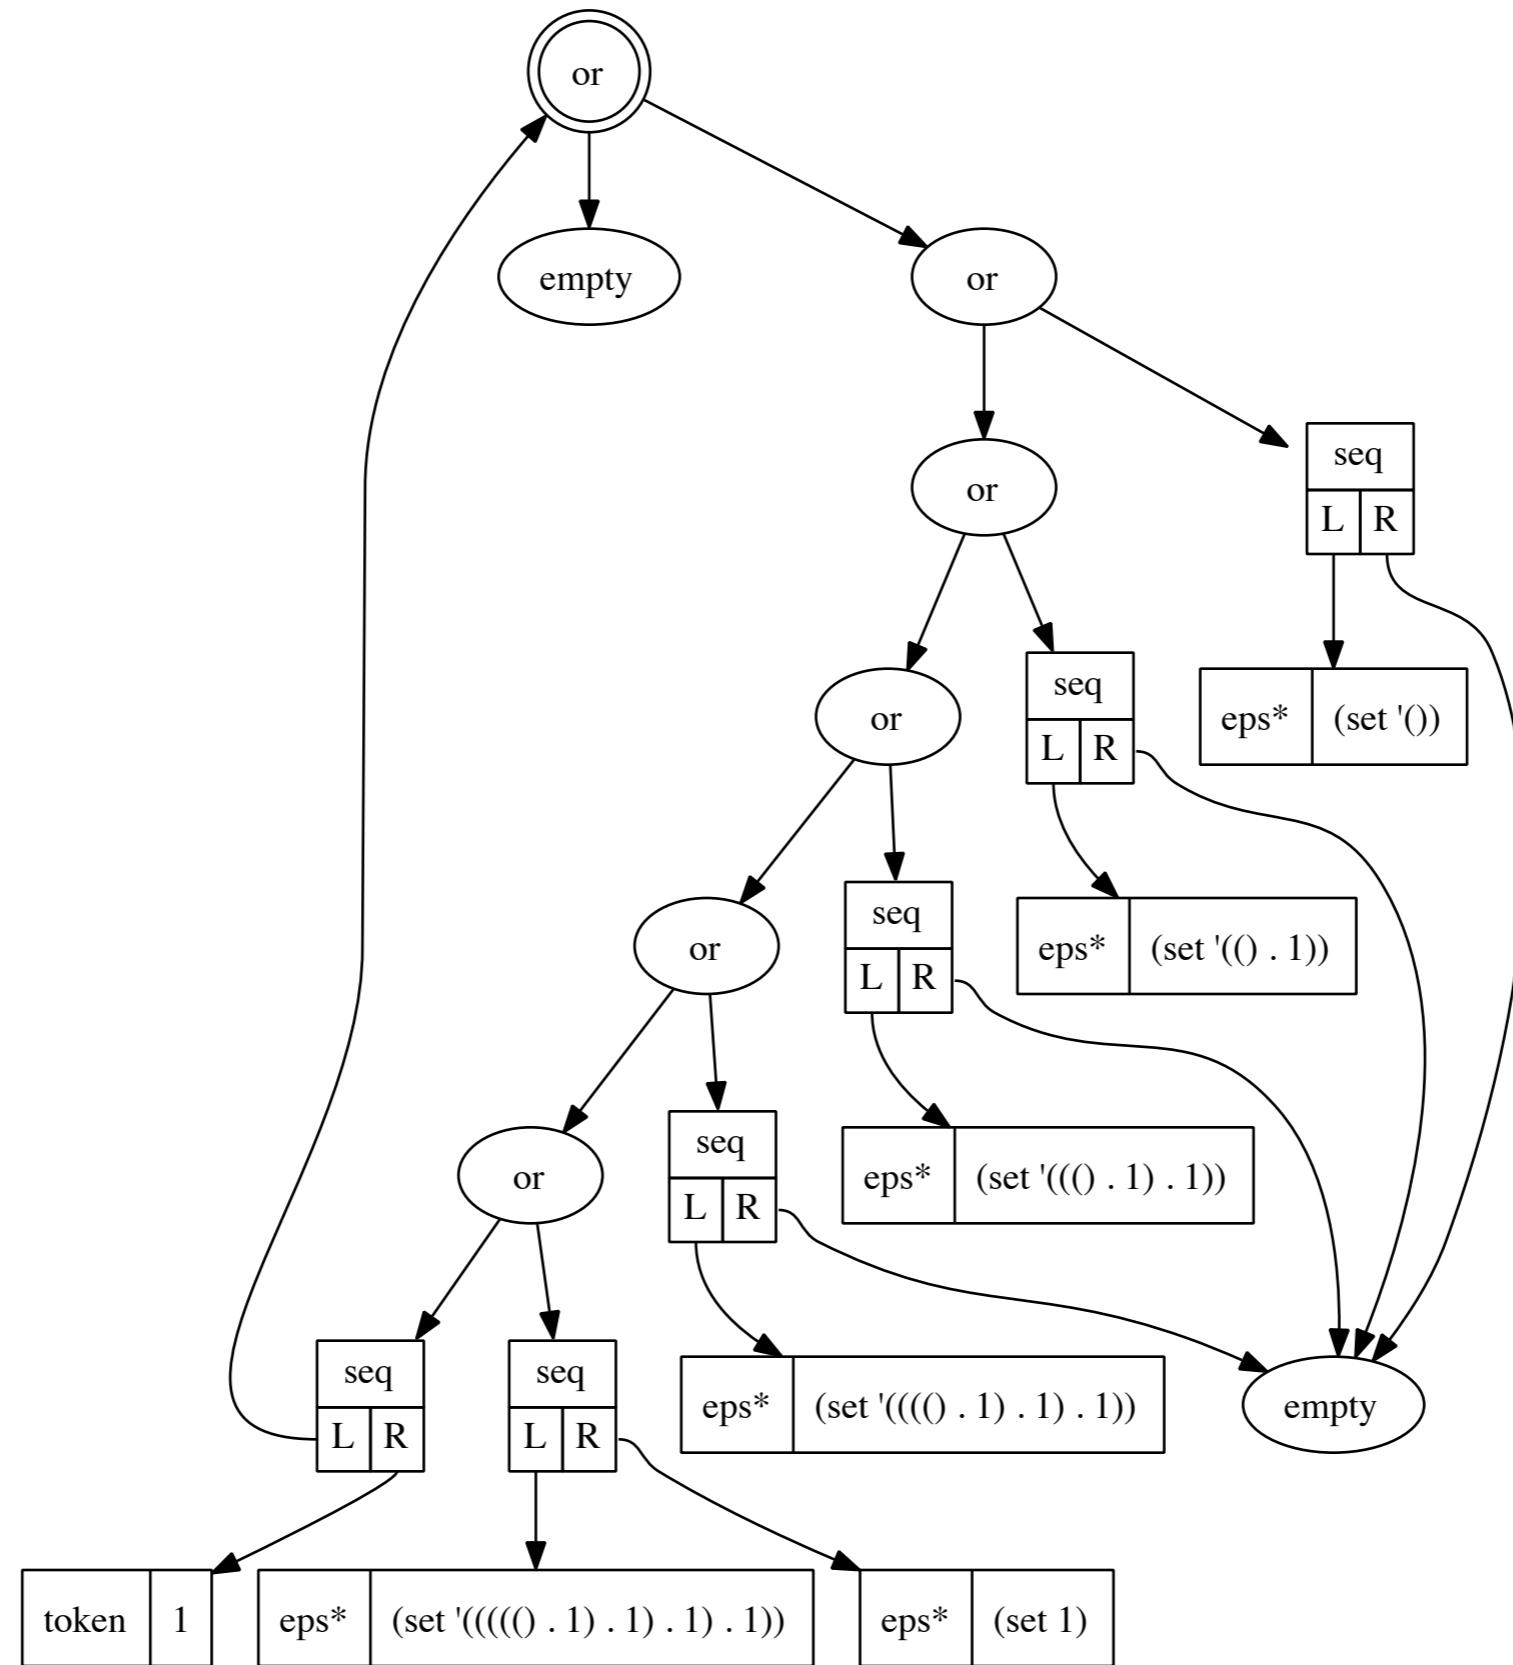

$$((\epsilon\downarrow\{t_1\})\circ p)\rightarrow f\Rightarrow p\rightarrow\lambda t_2.(t_1,t_2)$$

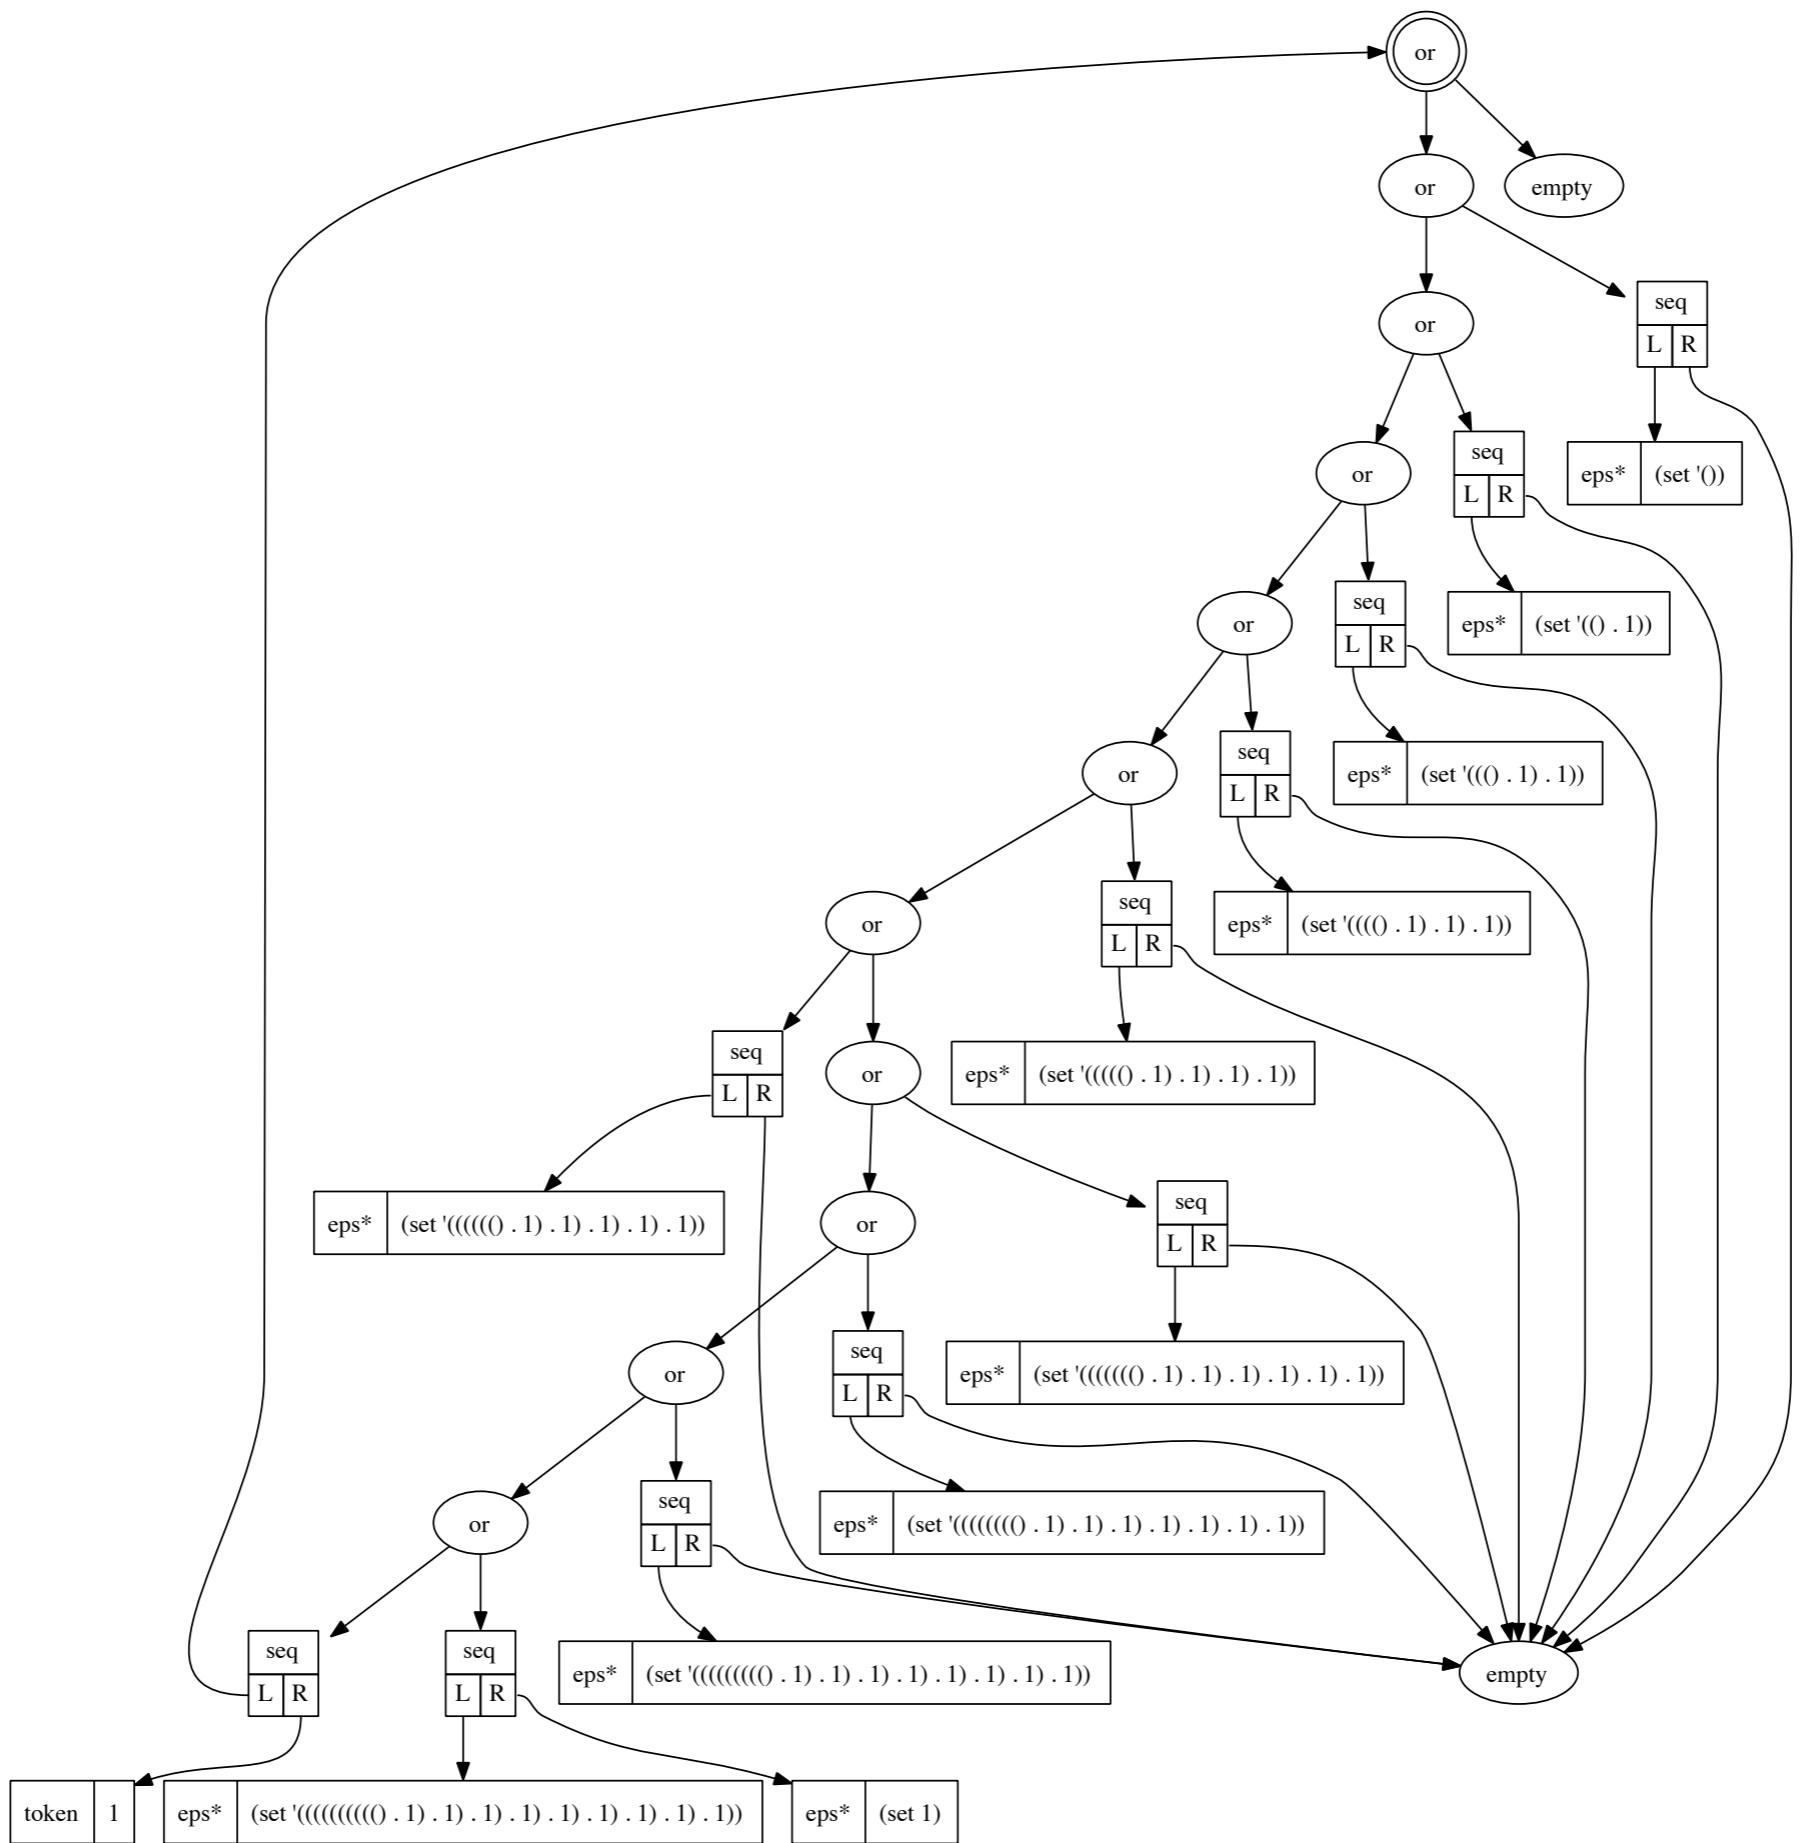

$$(p\rightarrow f)\rightarrow g\Rightarrow p\rightarrow(g\circ f)$$

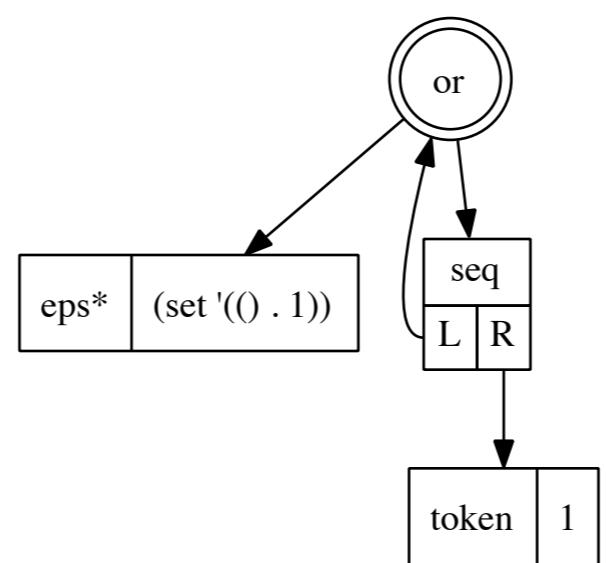

$$\emptyset^\star\Rightarrow\epsilon\downarrow\{\langle\rangle\}\,.$$

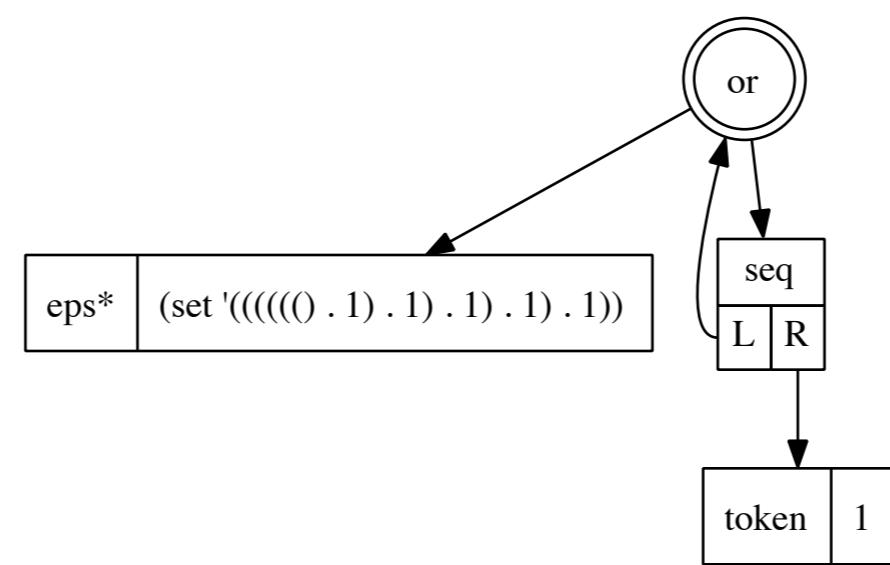

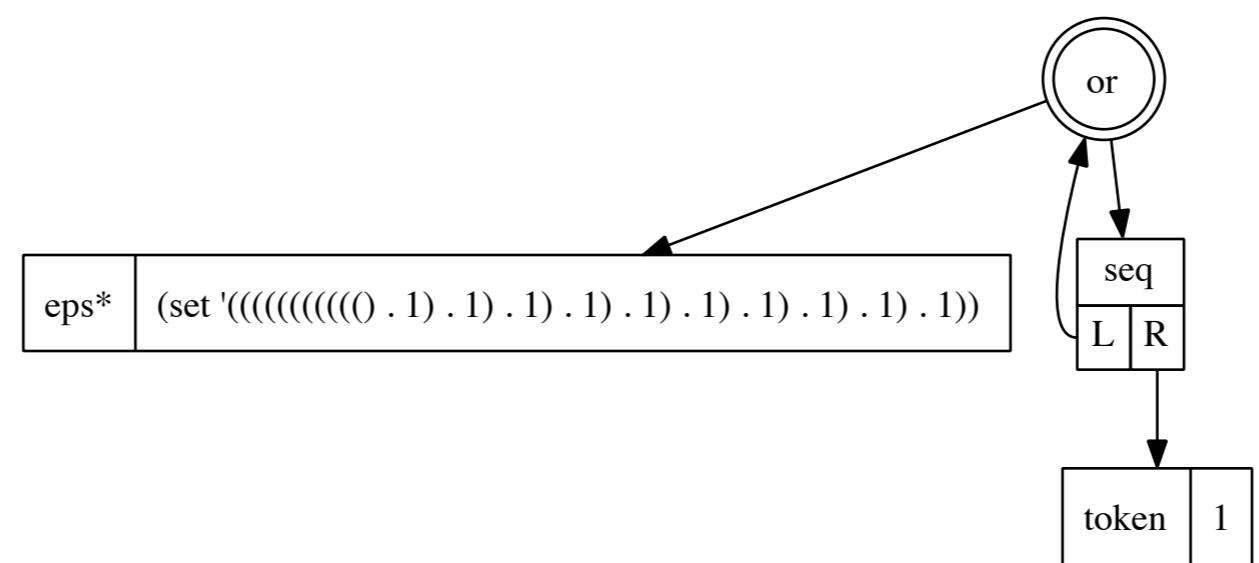

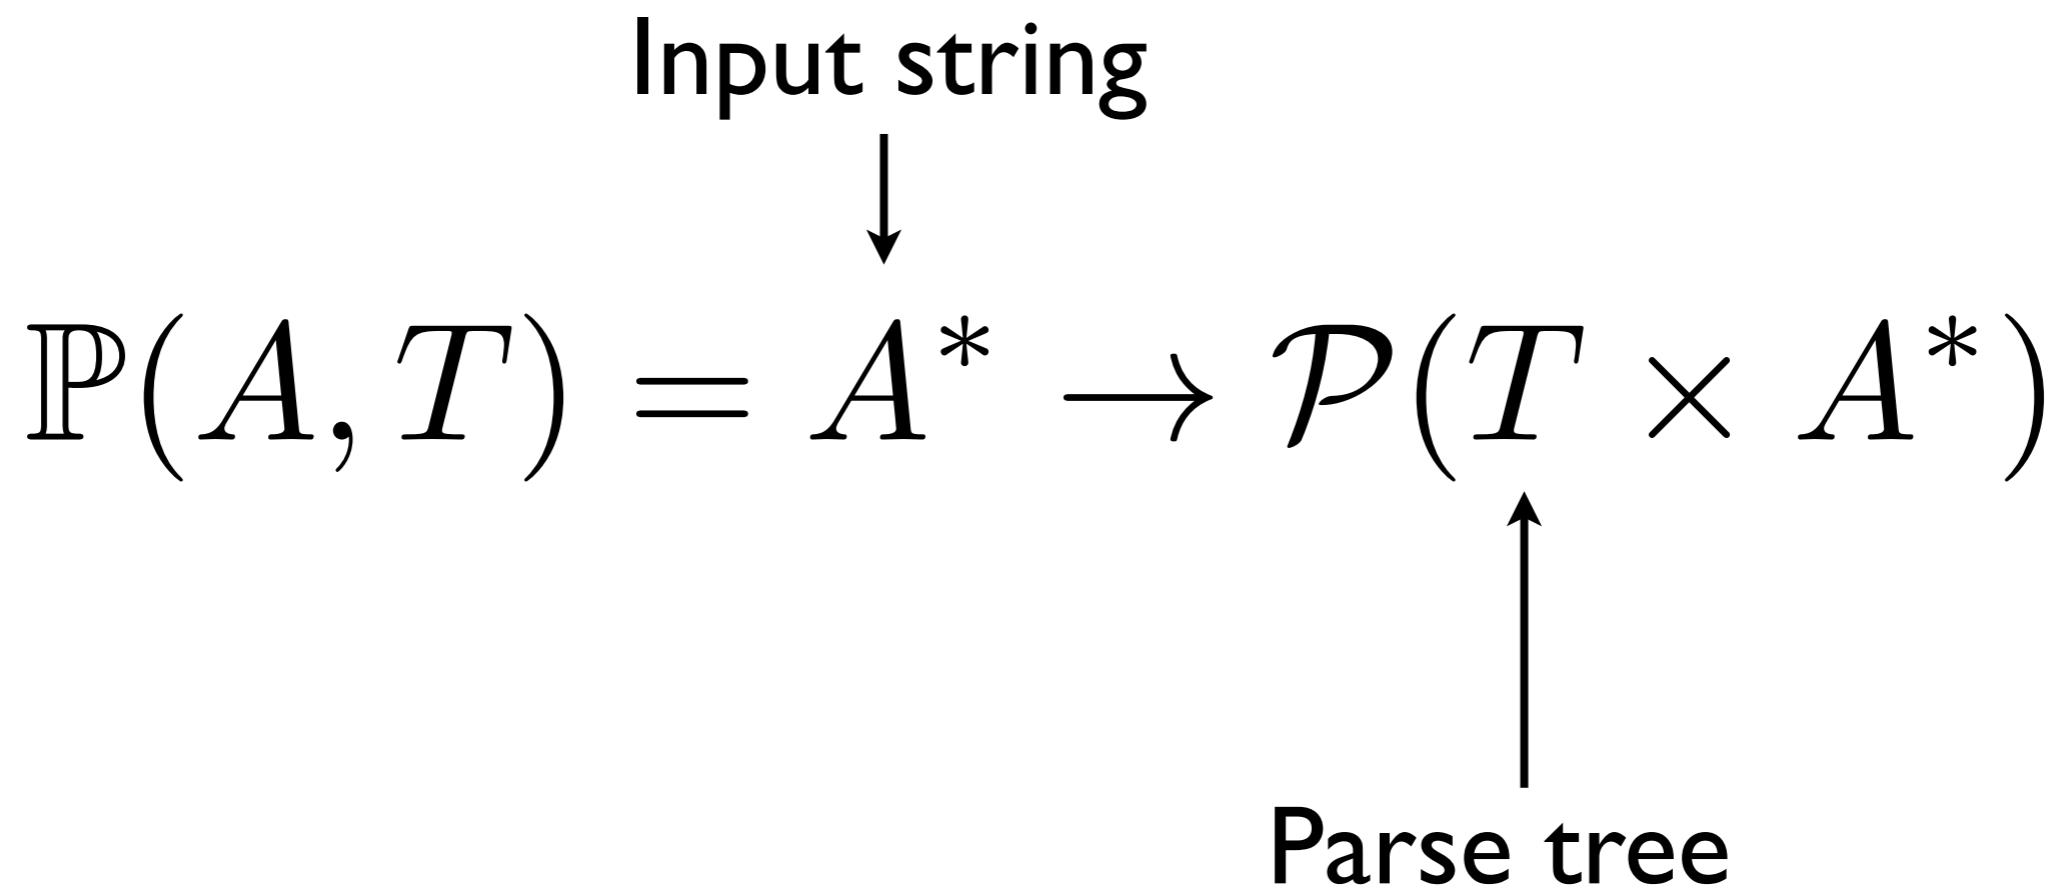

What is a parser?

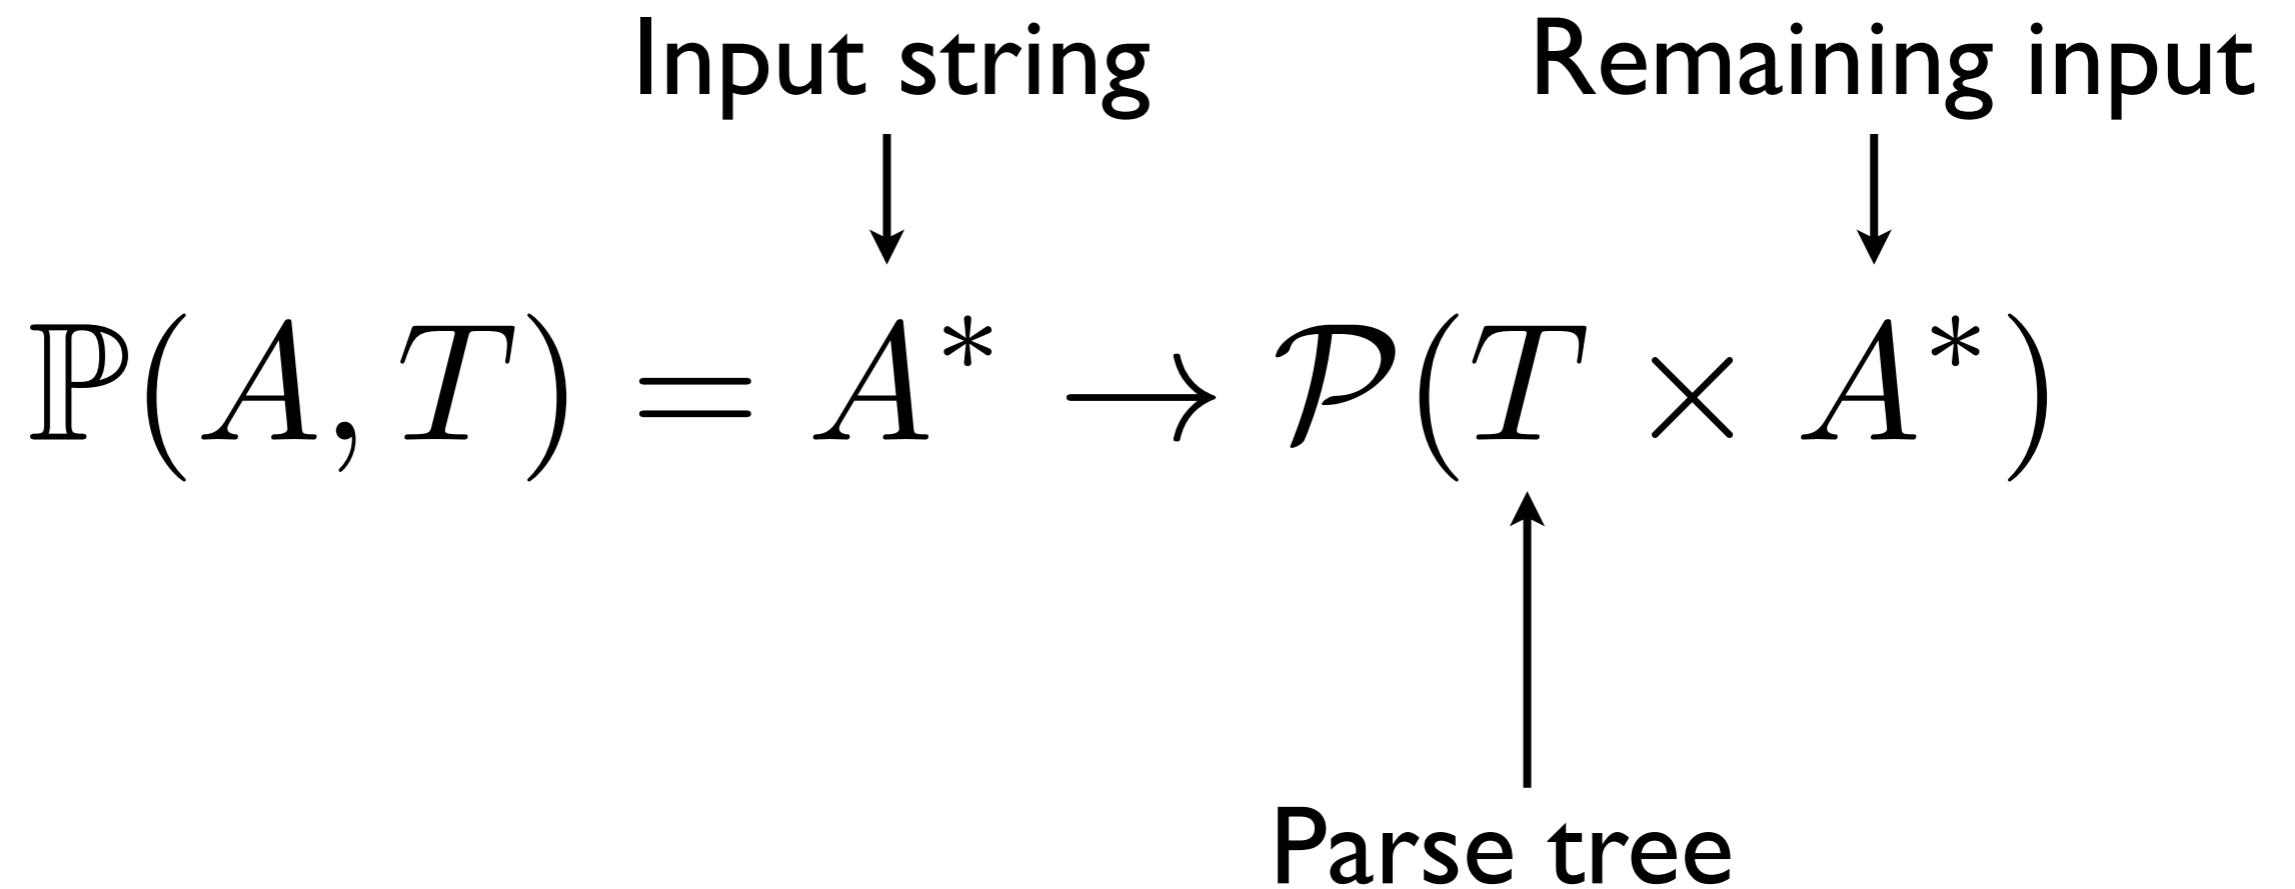

$$\mathbb{P}(A,T)=A^*\rightarrow \mathcal{P}(T\times A^*)$$

Input string

$$\mathbb{P}(A, T) = A^* \rightarrow \mathcal{P}(T \times A^*)$$

$$\lfloor \mathbb{P} \rfloor(A,T)=A^*\rightarrow\mathcal{P}(T)$$

Input string

$$\lfloor P \rfloor(A, T) = A^* \rightarrow \mathcal{P}(T)$$

Input string

$$\lfloor P \rfloor(A, T) = A^* \rightarrow \mathcal{P}(T)$$

Parse tree

$$p\in \mathbb{P}(A,T)$$

$$\lfloor p\rfloor(w)=\{t:(t,\epsilon)\in p(w)\}$$

Context-free parsers

$$w \equiv \lambda w'. \begin{cases} \{(w, w'')\} & w' = ww'' \\ \emptyset & \text{otherwise.} \end{cases}$$

$$\epsilon \equiv \lambda w.\{(\epsilon,w)\}$$

$$\emptyset \equiv \lambda w.\{\}$$

$$p\in \mathrm{P}(A,X)$$

$$q\in \mathrm{P}(A,Y)$$

$$p\cdot q\in \mathrm{P}(A,X\times Y)$$

$$p \cdot q = \lambda w . \{ ((x,y),w'') : (x,w') \in p(w), (y,w'') \in q(w') \}$$

$$p \cdot q = \lambda w. \{ ((x, y), w'') : (x, w') \in p(w), (y, w'') \in q(w') \}$$

Input

$$p \cdot q = \lambda w. \{ ((x, y), w'') : (x, w') \in p(w), (y, w'') \in q(w') \}$$

Input

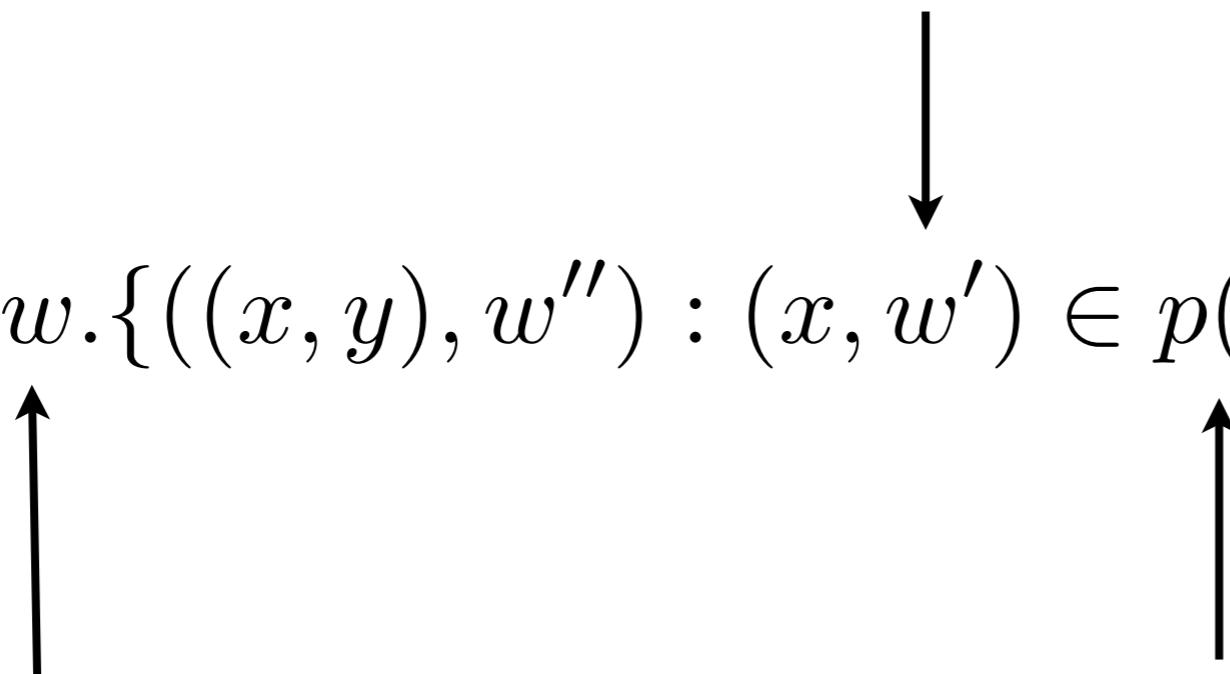

First parse

Left overs

$$p \cdot q = \lambda w. \{ ((x, y), w'') : (x, w') \in p(w), (y, w'') \in q(w') \}$$

Input

First parse

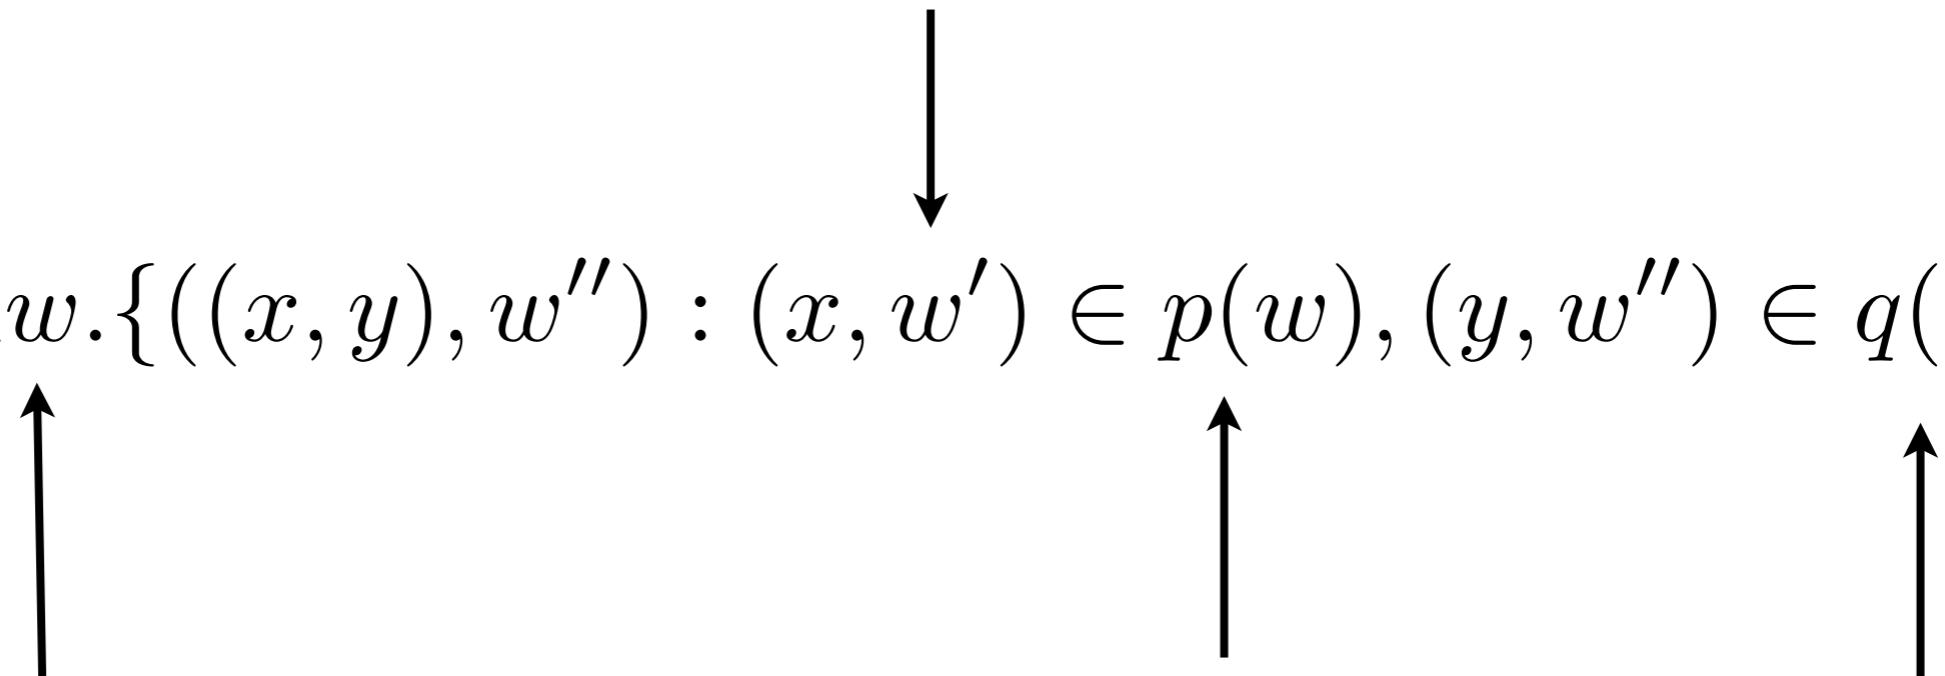

Left overs

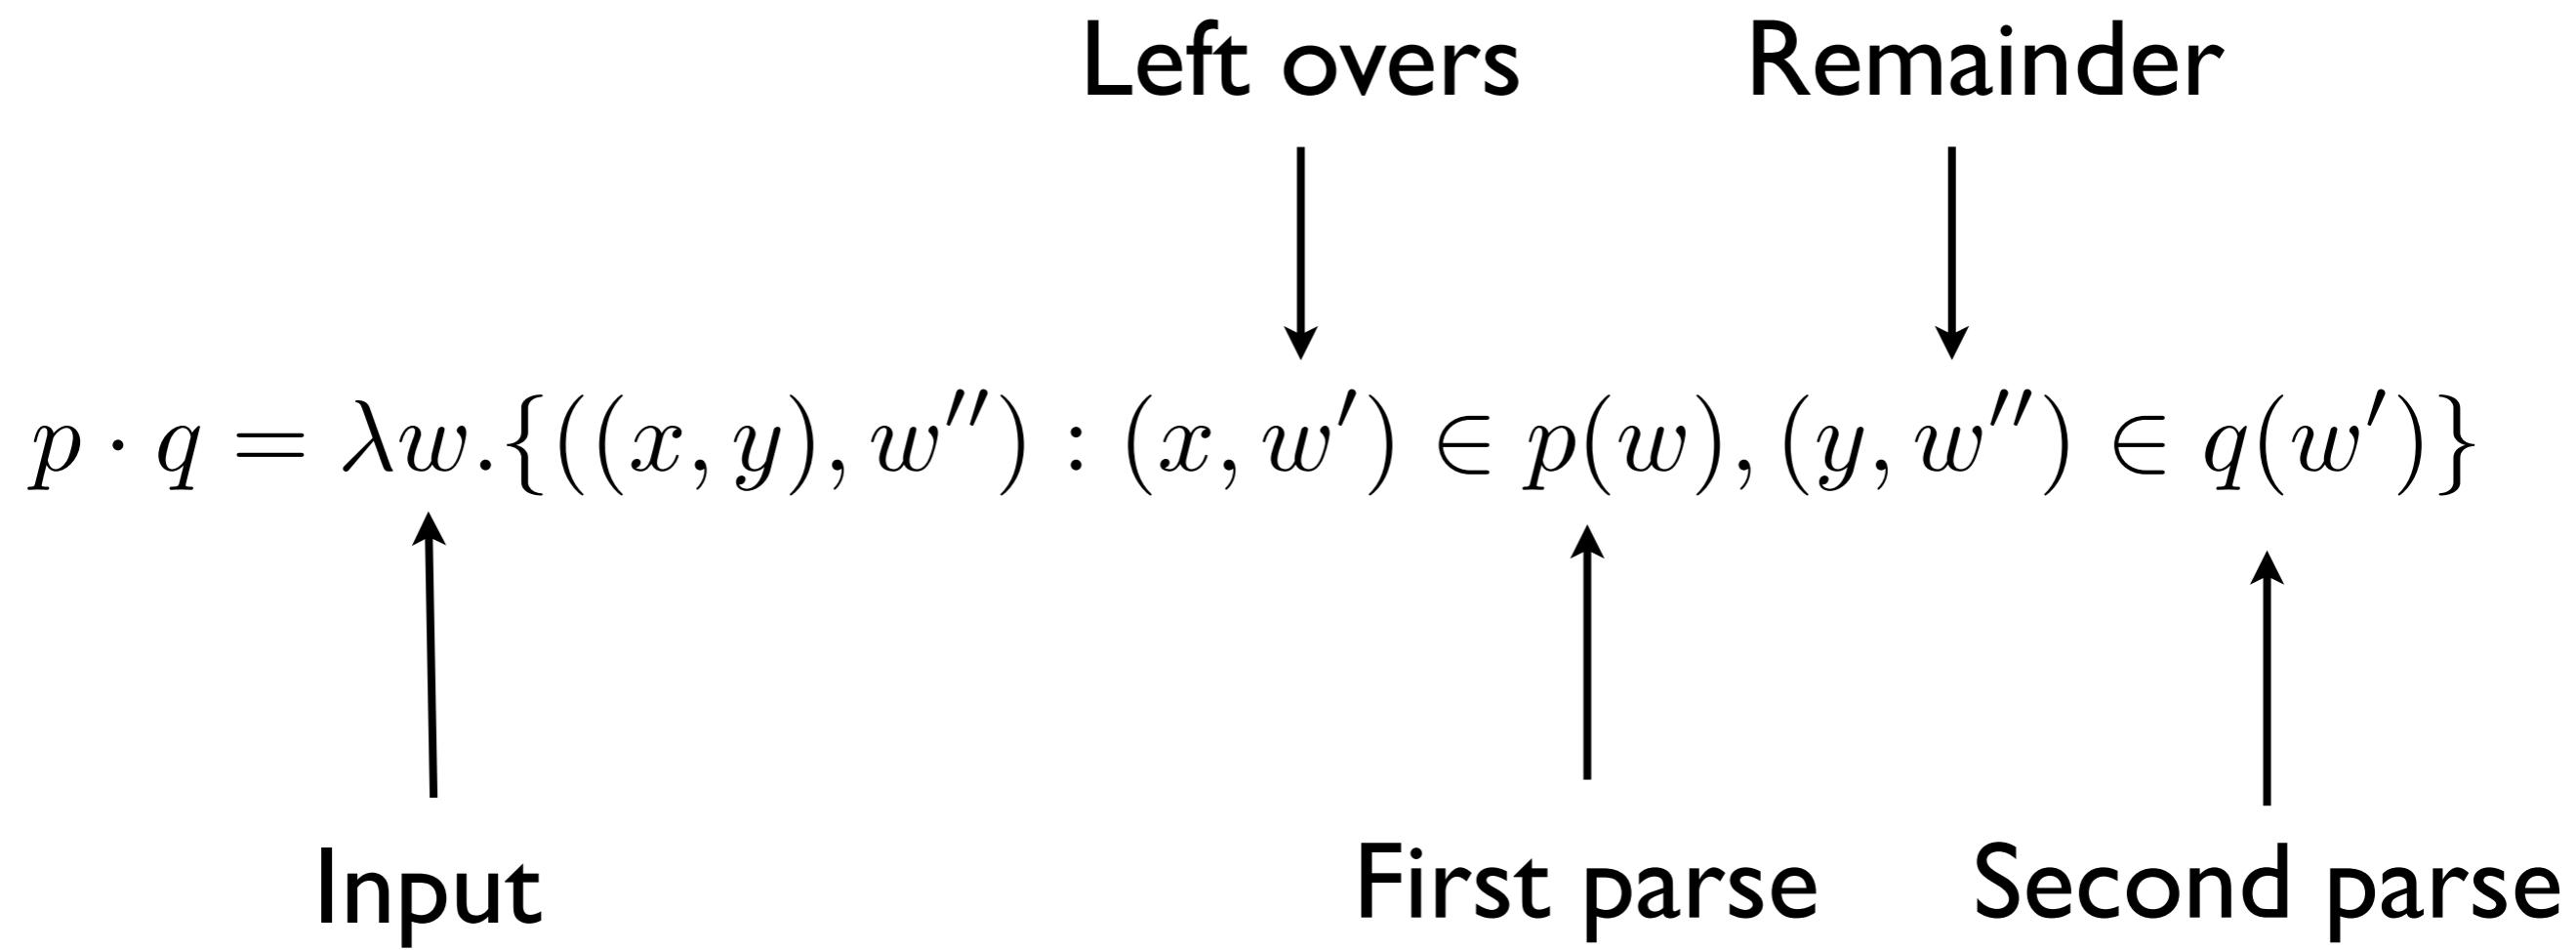

$$p \cdot q = \lambda w. \{ ((x, y), w'') : (x, w') \in p(w), (y, w'') \in q(w') \}$$

Input

First parse

Second parse

$$p\in \mathbb{P}(A,X)$$

$$q\in \mathbb{P}(A,X)$$

$$p\cup q\in \mathbb{P}(A,X)$$

$$p\cup q=\lambda w.p(w)\cup q(w)$$

$$f\in X\rightarrow Y$$

$$p \in \mathbb{P}(A,X)$$

$$p \rightarrow f \in \mathbb{P}(A,Y)$$

$$p \rightarrow f = \lambda w . \{ (((f(x),w') : (x,w') \in p(w) \}$$

Defining the derivative

$$D_c:\mathbb{L}\rightarrow\mathbb{L}$$

$$D_c:\mathbb{P}(A,T)\rightarrow\mathbb{P}(A,T)$$

$$D_c(p) = \lambda w.p(cw) - (\lfloor p\rfloor(\epsilon)\times\{cw\})$$

$$D_c(p) = \lambda w.p(cw) - (\lfloor p \rfloor(\epsilon) \times \{cw\})$$

$$p(cw) = D_c(p)(w) \cup (\lfloor p \rfloor(\epsilon) \times \{cw\})$$

$$\lfloor p\rfloor(cw)=\lfloor D_c(p)\rfloor(w)$$

Calculating the derivative

$$D_c(c) = \epsilon \rightarrow \lambda \epsilon . c$$

$$D_c(c') = \emptyset \text{ if } c \neq c'$$

$$D_c(p\cup q)=D_c(p)\cup D_c(q)$$

$$D_c(p\rightarrow f)=D_c(p)\rightarrow f$$

$$D_c(p \cdot q) = \begin{cases} D_c(p) \cdot q & \epsilon \notin \mathcal{L}(p) \\ D_c(p) \cdot q \cup (\epsilon \rightarrow \lambda \epsilon. \lfloor p \rfloor(\epsilon)) \cdot D_c(q) & \text{otherwise.} \end{cases}$$
